

The Toolkit is an inclusive web-based platform that equips the industry with the necessary resources to champion SPHM within their facility. It is intuitive and easy to use, and consists of a number of tools designed to bolster a facility's program(s). These tools include a digital self-assessment (based on the American Nurses Association National Standards of Safe Patient Handling), a resource library, a program return-on-investment (ROI) calculator, a SPHM equipment analysis, and global forum. The Toolkit is a paperless, accessible means to staying connected and up-to-date.

In 2015, Atlas Lift Tech began working with the American Nurses Association (ANA) to develop a self-assessment tool that would allow a facility to determine its compliance with the ANA's 8 Interprofessional Standards of SPHM. The SPHM Self-Assessment uses a coefficient to provide a self-evaluation of the facility's compliance

Self-Assessment

An Interdisciplinary team of safe patient handling experts met to establish a scoring system of the SPHM Self-Assessment. Results are available for viewing and downloading from the Results Dashboard

Results Dashboard

The Return Over Investment (ROI) Calculator delivers real data about the financial implications of risk at the user's facility

ROI Calculator

The Equipment Analysis is a tool that you can use to find gaps in your facility as it relates to SPH equipment. This resource will allow you to take inventory across your entire facility. It generates a GAP Analysis and Five-Year Capital Purchase Plan based on your specific needs.

Equipment Analysis

The Resource Library is a compilation of websites and documents that provide the user with the foundations of SPHM. It is updated regularly to reflect the current dialogue around SPHM

Resource Library
